What Can I Put in My Backyard Instead Of Grass?

Whether you're looking to reduce your water usage, save on maintenance costs, or just want a change of scenery, there are plenty of alternatives to grass for your backyard. From gravel to artificial turf, read on to find out more about your options!

No Grass Backyard Options

Synthetic turf

Installing synthetic turf in your backyard is an excellent way to create a beautiful and low-maintenance yard. Synthetic turf looks great for years, won't be affected by changes in weather, or require hours spent mowing, fertilizing, and weeding. Depending on the size of your backyard and the type of synthetic turf you want, it may cost more upfront than traditional grass, but it will end up saving you time and money over its lifespan.

Patio

Adding a patio to your backyard can be a great way to have a low-maintenance landscape without sacrificing style. Whether you are looking for an easy entertaining area or simply want a space to relax away from the hustle and bustle of everyday life, installing a patio is an ideal choice. Begin planning your project with two main considerations – material selection and design.

For materials, popular choices include naturally occurring stones such as flagstone and bluestone, clay products like bricks and pavers, or concrete options such as stamped concrete for a decorative finish.

Pool

If you're looking to give your backyard a new look, consider replacing the grass with a pool! Not only will it add value to your home and create a new space for entertaining, but it is also an enjoyable way to spend the summer months with family and friends. Start the process by considering layout options and materials available.

You'll need to choose a pool design that fits the shape of your lawn, and decide between above-ground or in-ground. Be sure you understand all local regulations related to pool installation and safety requirements.

Gravel

Installing gravel instead of traditional grass in your backyard can be a great way to improve the aesthetics of your outdoor space while reducing maintenance. Gravel is easy to care for and doesn't require frequent mowing or watering like grass does. Additionally, it can help reduce weeds, erosion, and mud problems.

When installing gravel in your backyard, it's important to choose the right type for your needs. Consider weather conditions and how much foot traffic the area will receive. You should also take into account the size of gravel and color you want to use, as well as any edging materials you may need for pathways or borders around plants.

Wood chips

If you're looking for a creative and cost-effective way to replace a grassy backyard, wood chips could be the answer. Unlike grass, wood chips require very little maintenance as they can often regenerate quickly if covered correctly. Moreover, they are also more resilient to most pests, distributing excess water away from their roots.

Deck

Have you ever thought of skipping the hassle that comes with mowing and watering grass, and getting a sleek and easy-to-maintain alternative instead? Installing a deck in your backyard may be the answer to all your lawn maintenance woes! Decking is becoming increasingly popular due to its simple installation process, affordability, and versatile designs.
